

Amulet provides **design, efficiency analysis, installation** and **maintenance** of security system meeting all needs of our customers.

With CAD software developed by Amulet, we provide optimum in security.

Amulet has developed intelligent modelling and simulation software that automatically detects vulnerabilities in a sophisticated building infrastructure and significantly improves the security system performance.

Our solution consists in designing security system at a facility model by choosing detector, sensor, and camera models from the data base and placing them at the facility model, testing, and outputting visual results and effectiveness ([European Patent No.1669912](#) , [Canadian Patent No.2,538,139](#)

, [Russian Patent No.2219576](#)

).
